R	OUTING AND	RECORI	D SHEET
SUBJECT: (Optional) Report on Use of Directors Through FY-1985	ate of Adminis	1	Resource Augmentation for FY-1982
FROM. Harry E. Fitzeater Deputy Director for Admin	istration	EXTENSION	DDA 84-0043/12 DATE 9 January 1984
TO: (Officer designation, room number, and building)	DATE PORWARDED	OFFICER'S INITIALS	COMMENTS (Number each comment to show from whom to whom. Draw a line across column after each comment.)
Director of Central Intelligence			Bill, This is in response to your:
2. 7D 5607 Hqs			request this morning for a rewrite of the Data Processing, Logistics, and Training papers. This paper
			may still be too long but there has been a lot done in these three areas.

Support Facilities

The buildup and revitalization of our intelligence capabilities could not be accomplished without improved communications, computer capabilities and training facilities. We inherited a 1960 vintage communications network. Without computers capable of employing technologies and capabilities of the late eighties even doubling intelligence personnel to the level of the 1960s would not have been enough to keep up with expanded range and complexity of today's intelligence needs. Recruiting and training facilities could not bring on people fast enough to give them the range of skills required by the rebuilding. Moreover, if improved communications and more sophisticated computer facilities are to be effective, they must be housed in a facility having a size, location, and design which maximizes these improvements.

25X1

SECRET

Secure fly-away communication packages have been developed 25X1
to support on-site delivery of the CIA daily intelligence support to traveling
VIPs. Computer-assisted communication terminals are being deployed in overseas
stations 25X1
. 25X1
The Agency's training establishment had been drawn down in the past decade
and was not capable of playing its vital role in the revitalization of CIA. We
have added new positions to such important areas as Human Intelligence collection
training and to the teaching of over 30 foreign languages. An extensive training
program for intelligence analysts has been initiated and, for the first time, our
analysts are being exposed to the latest thinking on the process of analysis.
Facilities are being upgraded by new construction 25X
to permit that installation to increase its important role in
preparing our officers and those of the military to deal with counterterrorism and
25X1
Our basic training for new operation
officers has been expanded to cover international economics, narcotics interdiction
and other priority issues. Additional officers have been assigned to meet the
rising demands for training 25X1 Training
for our computer systems and the use of computer-assisted training programs has been
expanded significantly.

In our rebuilding program, we have committed the Agency to Automatic Data Processing (ADP) related programs. A major management system for targeting the improved overhead photographic system is nearing completion. Large data processing systems for managing our financial resources, procurement/supply functions and inventories, and compensation of employees and contractors are under development. A major

information handling system to provide diverse functional capabilities to assist analysts in the total intelligence analysis cycle had been under development for many years. Because the program had made little progress and its completion and planned capability were questionable, I redirected the development project in mid-1982. In early 1983 a functional capability was achieved and currently over 300 CIA and 100 DIA analysts are on electronic terminals using the system. This number is expected to grow to 2,000 as terminals are acquired and installed. The analysts are enthusiastic about the system and the capability it brings them.

Other less dramatic, but equally important, ADP programs have moved forward. The Agency's central computing facilities have been enhanced to deal with our exploding demands for electronic data processing that are being driven by the substantial increase in new and expanded intelligence collection and production. We have standardized on a family of word processing devices, and developed an Agency-wide electronic mail system to make the concepts of office automation a reality. This latter has grown from 300 to 2,000 users in the last year.

Because of the potential benefits ADP and ADP-related activities offer, our investments will continue to grow. We believe it is inevitable that this technology will become a part of every CIA employee's daily activities.

Over the last decade the CIA logistics system had been left to languish. Ou	ır
was sorely in need of repair and upgrading of facilities and	25X1
personnel resources	25X1

As our intelligence collection analysis and production expanded, the inadequacy of the existing processing and printing of finished intelligence was evident. 25X We are already seeing the benefits of the initial outlay in the quality, timeliness, and efficiency in handling the increased volume of finished intelligence for the Agency and the intelligence Community.	•		CECNET	•
